## PROJECT HIGHLIGHTS

- Through an alliance with a drilling and completion fluids supplier, HAZCO developed a contract to provide a more-secure alternative to landfill disposal of invert drill cuttings.
- HAZCO developed specially designed seal-top trailer units that are able to properly contain still drying invert drill cuttings. Trailers were designed with an innovative liner and a vibrating system that makes dumping speedy.
- HAZCO carried out the hauling and containment of the drill cuttings into salt caverns.
- HAZCO has adapted to the specific contexts of the removal sites. For example, at one site, HAZCO has removed invert drill cuttings from a mountainside by way of a weight-restricted bridge.
