PROJECT HIGHLIGHTS

Design and construction of a Waste Management Facility that serves the residents of a number of municipalities and industrial clients in that region.

The facility is equipped with a state-of-the-art designated industrial and oilfield waste disposal cell to serve oil and gas producers in the active Northern Alberta region. In the first year of operating, the landfill accepted over 100,000 tonnes of industrial and oilfield waste.

The facility includes bioremediation cells for treatment of soils.
