

COMBINING SUPERIOR SERVICE WITH PROVEN TECHNOLOGIES

HAZCO Environmental Services, Western Canada's largest environmental services company, is pleased to introduce new alliance partnerships that combine our superior site services, project and waste management capabilities with North America's leading environmental technology suppliers: Maple Leaf Environmental Equipment, Catalytic Combustion Corporation and QED Environmental Systems. HAZCO is committed to providing turnkey reliable solutions to meet our clients' remediation and pollution control systems needs. Our comprehensive technology offering, liability coverage and extensive health & safety program provide our clients with proven solutions and value added long-term operational support.

HAZCO's technology manufacturing partner, MLEE, is Canada's largest supplier of environmental remediation systems and one of North America's top systems suppliers. MLEE designs and manufactures systems for soil & groundwater remediation and industrial process applications. Their in-house expertise combined with a large business volume throughout North America makes MLEE a stable and expert technology manufacturing partner for HAZCO and our clients.

Catalytic Combustion Corporation (CCC) provides state of the art air pollution control technologies. Since 1950 CCC has developed air pollution control and catalyst technologies for VOC destruction for a diverse number of environmental and industrial markets.

QED Environmental Systems is a global leader supplying pumping systems and equipment for sampling groundwater, recovering contaminated ground water, fuels, and solvents, and controlling leachate and condensate at landfills.
