HAZCO's is pleased to announce it's recent purchase of the assets of Western Waste Management (WWM). WWM is a Vancouver-based company which provides filter press, dredging and tank rentals services across Western Canada and the Northwest United States to a variety of industrial customers.

Several of WWM employees have joined the HAZCO team, most notably Mike Dow, who will assume the role of Operations Coordinator.

The WWM team brings over 25 years experience as owner operators of a fleet of filterpresses, mix-tanks, liquid storage tanks, dredge and ancillary equipment. This selection of equipment will allow us to set up operations in isolation and also provide our own power to operate the equipment.

This acquisition will broaden our service offerings, technological abilities and geographic representation and solidify HAZCO's position as a comprehensive Environmental Company, further allowing us to service all our clients environmental needs in house.
